GS 32 Pre-Trimming Knife

www.gotschild.de

The **Gottschild-System GS 32 Pre-Trimming Knife** is the optimal handheld trimming blade for separating 3D furniture components from the full press bed of laminated parts.

Advantages

The **GS 32** Pre-Trimming Knife is user-friendly and results in the optimal pre-cut out of the carpet for parts going into Gottschild Trimming Machines. The support base has a diameter of 32mm that ensures easy movement between the pressed parts.

We designed the knife head so that the blades are easy to change. Commercially available replacement knives keep maintenance costs low.

The **GS 32** is also the best pre-trimming knife when the final trim is done manually with the Gottschild **FS 55 Final Trimming Knife**.
